REPAIR MANUAL

for ROTAX®-engines type

125 MAX DD2 evo

Part no. 298063
Preface
Before carrying out repair work on the engine, read the Repair Manual carefully. If any passages of the Manual are not clearly understood or if you have questions, please contact an authorized Distribution or Service Center for ROTAX®-kart engines.

Contents
This Repair Manual contains instructions for all the necessary repair and maintenance work on the ROTAX®-Engine Type 125 MAX DD2 evo.

Symbols used
This Manual uses the following symbols to emphasize particular information. This information is important and must be observed.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![WARNING]</td>
<td>Identifies an instruction, which if not followed may cause injury or endanger the life of the driver, mechanic or third party.</td>
</tr>
<tr>
<td>![ATTENTION]</td>
<td>Denotes an instruction which if not followed may severely damage the engine. Noncompliance might lead to health hazards under certain conditions.</td>
</tr>
<tr>
<td>![ENVIRONMENTAL NOTE]</td>
<td>Environmental notes give you tips on environmental protection.</td>
</tr>
</tbody>
</table>

NOTE
Indicates supplementary information which may be needed to fully complete or understand an instruction.

☑ Denotes a checking operation

[TIP] This information gives you additional advice and tips

Technical data ...........................................................................................................7
**Purpose**
This Repair Manual is based on information and the state-of-knowledge of BRP-Rotax of the product current at the date of issue.

**Documentation**
For additional information on engines, maintenance or parts, you can also contact your nearest authorized ROTAX®-Engine distributor.

**ROTAX® distributors**

**Engine serial number**
If you have any concerns or questions, always keep your engine serial number ready for questions from your dealer, as the manufacturer makes modifications to the engine for product improvement. The engine number is stamped on the clutch side housing half. See Figure 1.

SAFETY

General note
Although the reading of such information does not eliminate the hazard, the understanding of the information will promote its correct use. Always take care by conducting manual work and use safety equipment. The information and components-/system descriptions contained in this Manual are correct at the time of publication. BRP-Rotax, however, maintains a policy of continuous improvement of its products without imposing upon itself any obligation to install them on its products previously manufactured.

Revision
BRP-Rotax reserves the right at any time, and without incurring obligation, to remove, replace or discontinue any design, specification, feature or other details.

Specifications
Specifications are given in the SI metric system with the USA equivalent in parenthesis.

SAFETY NOTICE

General note

⚠️ WARNING
Non-compliance can result in serious injuries or death!
Comply with the safety advice of the engine and kart manufacturer.

This information relates to the preparation and use of ROTAX® Kart engines and has been utilized safely and effectively by BRP-Rotax. However, BRP-Rotax disclaims liability for all damage and/or injuries resulting from the improper use of the contents. BRP-Rotax strongly recommend that any service be carried out and/or verified by a highly skilled professional mechanic.

Manual
This Manual has been prepared as a guide to correctly service and maintain all ROTAX® Kart engines.
This Manual uses technical terms which may be slightly different from the ones used in the Illustrated Parts Catalog.
It is understood that this Manual may be translated into another language. In the event of any discrepancy the English version prevails.

Warning
It is your responsibility to be completely familiar with the safety instructions including warnings and cautions described in this Manual. These warnings and cautions advise of specific operating and servicing methods that, if not observed, can cause a serious engine malfunction or cause the engine to lose power which can result in serious injury, damage to equipment or even to death.
It is, however, important to understand that these warnings and cautions are carefully checked. BRP-Rotax can not evaluate and advise the user of all conceivable ways in which service might be done or of the possible hazardous consequences that may occur.

Safety instruction
In addition to observing the instructions in our Manual, general safety and accident preventative measures, legal regulations and regulations of any superior authority must be observed.
Where differences exist between this Manual and regulations provided by any authority, the more stringent regulation should be applied.
Illustration
The content depicts parts and/or procedures applicable to the particular product at its time of manufacture. It does not include dealer modifications, whether authorized or not by BRP-Rotax, after manufacturing the product.

Locking devices
Locking devices (e.g. locking tab, self-locking fasteners, etc.) must be installed or replaced with new ones, where specified. If the efficiency of a locking device is impaired, it must be replaced.

Torque wrench tightening
Torque wrench tightening specifications must be strictly adhered to.

NOTE
If not specified otherwise, the threads are not lubricated when fastened.

INSTRUCTION

General note
Engines require instructions regarding their application, use, operation, maintenance and repair.
Technical documentation and directions are useful and necessary complementary elements for personal instructions, but can by no means substitute theoretical and practical instructions.
These instructions should cover explanation of the technical context, advice for operation, maintenance, use and operational safety of the engine.

Safety notice
In this technical Manual passages concerning safety are especially marked. Pass on safety warnings to other users!

Modifications
Non-approved modifications to the engine and associated components likewise releases BRP-Rotax from its warranty obligations.

Accessories
This engine must only be operated with accessories supplied, recommended and released by BRP-Rotax. Modifications are only allowed after the exceptional advice or approval by the engine manufacturer.

Spare parts

<table>
<thead>
<tr>
<th>ATTENTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spare parts must comply with the requirements defined by the engine manufacturer. This is only warranted by use of GENUINE ROTAX® spare parts and/or accessories (see IPC) or suitable equivalent in the manufacturer’s opinion. Otherwise, any limited warranty by BRP-Rotax is null and void (see latest Warranty Conditions). Spare parts are available at the authorized ROTAX® Distribution- and Service Center. Any warranty by BRP-Rotax becomes null and void if spare parts and or accessories other than GENUINE ROTAX® spare parts and/or accessories are used (see latest Warranty Conditions).</td>
</tr>
</tbody>
</table>

Tools

<table>
<thead>
<tr>
<th>ATTENTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use only tools and appliances which are either cited in this Manual or in the Illustrated Parts Catalog of the relevant engine type for exceptional repair work.</td>
</tr>
</tbody>
</table>
BRP-Rotax
REPAIR MANUAL

Engine
A fundamental requirement is that on removal of the engine for repair or maintenance purposes it should be secured on the Special Tools part no. 877930 (Trestle support) and part no. 676052 (Trestle adapter) available at your authorized Distributor or Service center for ROTAX® Kart Engines.

TECHNICAL DOCUMENTATION

General note
The information contained is based on data and experience that are considered applicable for skilled mechanics under normal conditions. Due to the fast technical progress and fulfillment of particular specifications of the customers it may occur that existing laws, safety prescriptions, constructional and operational regulations cannot be transferred completely to the object bought, in particular for special constructions, or may not be sufficient.

Status
The current edition of the Manual is shown at the bottom of the pages or on the front cover.

Reference
Any reference to a document refers to the latest edition issued by BRP-Rotax, if not stated otherwise.

Illustrations
The illustrations in this Manual are sketches and show a typical arrangement. They may not represent in full detail or the exact shape of the parts which have the same or similar function. Therefore deduction of dimensions or other details from illustrations is not permitted as the scale may not be 1:1.

NOTE
The Illustrations and Documents in this Manual are stored in a database and are provided with a consecutive number. This number (e.g. KA_125MAX_001) is of no significance for the content.

USE FOR INTENDED PURPOSE

Safety note

⚠️ WARNING
Non-compliance can result in serious injuries or death!

Use
The ROTAX Engine Type 125 MAX DD2 has been designed and developed exclusively for use in a Kart. Any other use renders the BRP-Rotax factory limited warranty null and void.

Maintenance and repair conditions
Use for intended purpose also includes observation of the operational, maintenance and repair conditions prescribed by the manufacturer. This is a crucial factor concerning the reliability of the engine and can increase the durability of the engine.

Contents

The information given in the Repair Manual is based on data and experience which are considered to be applicable for a skilled mechanic under normal working conditions.

Table of contents

In this chapter the repair of engine ROTAX® 125 MAX DD2 evo is described. Some overlapping maintenance instructions are treated as generally valid information at the beginning of this section.
## GENERAL NOTE

### Safety notice

⚠️ **WARNING**

Non-compliance can result in serious injuries or death!

Besides our instructions in the documentation supplied, also respect the generally valid safety and accident preventive directives and legal regulations.

<table>
<thead>
<tr>
<th>Procedures and limits</th>
<th>The procedures and limits in this Manual constitute the manufacturers official recommendation for engine maintenance and operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Instruction</td>
<td>The guidelines given in the Repair Manual are useful and necessary supplements to training. They, however, cannot substitute competent theoretical and practical personal instruction.</td>
</tr>
<tr>
<td>Modifications</td>
<td>Non-authorized modifications as well as the use of components and auxiliary components not corresponding to the installation instructions exclude any liability of the engine manufacturer</td>
</tr>
<tr>
<td>Parts and accessories</td>
<td>We particularly emphasize that parts and accessories not supplied as genuine BRP-Rotax parts are not verified for suitability by BRP-Rotax and thus are not authorized for use. Installation and/or use of such products may possibly change or negatively influence the constructive characteristics of the engine. For damages resulting from use of non-genuine parts and accessories manufacturer refuses any liability</td>
</tr>
<tr>
<td>Special tools</td>
<td>Maintenance of engines and systems requires special knowledge and special tools. Use only the special tools recommended by BRP-Rotax when disassembling and assembling the engine.</td>
</tr>
</tbody>
</table>
AUTHORIZED PERSONNEL

General note
It is a requirement that all organizations or individuals have the required special tooling available and the necessary, training or experience to perform all tasks outlined.

Type-specific training
Any task outlined herein may be performed if the organization or individual has met the following conditions:

<table>
<thead>
<tr>
<th>Requisite knowledge</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Experience in performing the task and knowledge of ROTAX® Installation/Operators Manual and Repair Manual</td>
</tr>
</tbody>
</table>

Including:

| • Suitable work environment to prevent contamination or damage to engine parts or modules. |
| • Appropriate tools and fixtures as outlined in the ROTAX® Repair Manual. |
| • Reasonable maintenance practices are utilized. |

Information
Maintenance organizations and individuals are encouraged to contact BRP-Rotax through its worldwide distribution network for information and guidance on any of the tasks outlined herein.
Safetynote

WARNING

Non-compliance can result in serious injuries or death!
When carrying out maintenance and service work, respect without fail the safety regulations.

Ignition “OFF”

WARNING

Non-compliance can result in serious injuries or death!
This precautionary measure serves to avoid any injuries in case of an unintentional start of the engine. Principally ensure the following at each maintenance event: 1.) Ignition “OFF” and system grounded, 2) Disconnect battery and secure engine against unintentional operation.

Handling of fluids

WARNING

Non-compliance can result in serious injuries or death!
Non-compliance with this instruction may cause severe burns or scalding! Hot engine parts! Always allow the engine to cool down to ambient temperature before starting work.

At maintenance of cooling-, lubricating and fuel system take care without that no contamination, metal chips, foreign material and/or dirt enters the system.

Disassembly

At disassembly of the engine, mark the components as necessary to avoid any mix-up. Take care of these marks, do not ruin them.

Tool

ATTENTION

In order to avoid mechanical damages, never loosen or tighten screws and nuts with pliers but only with the specified tools.

Safety wiring

ATTENTION

If during disassembling/reassembling the removal of a safety item (e.g. safety wiring, self-locking fastener, etc.) should be necessary, it must be always replaced by a new one.
### Cleaning of parts

<table>
<thead>
<tr>
<th>ATTENTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>All metal and synthetic parts are generally washed with suitable cleaning agents. Before using new and unknown cleaning agents check the compatibility of materials.</td>
</tr>
</tbody>
</table>

**Removed parts**
Before re-using disassembled parts, clean, check and refit them as per instructions. Use clean screws and nuts only and inspect face of nuts and thread for damage. Check the contact faces and threads for damages. In case of doubt, use new screws and nuts.

**Measurements**
When making low tolerance measurements (s<0.1 mm) and in measuring bearing and housing components, the temperature of the components and their surroundings must be in the range 20 °C - 25 °C (68 °F – 77 °F). Only used certified measuring tools!

**Nuts**
Once loosened, **always** replace self-securing nuts!

**Sealing rings, O-rings**
At reassembly of the engine, replace all sealing rings, gaskets, securing elements, O-rings and oil seals.

**Re-assembly**
Before re-assembly check components whether parts are missing. Only use adhesives, lubricants, cleaning agents and solvents indicated in the maintenance instructions. If not respected, damage may be the consequence and no warranty claim.
## General note

**ATTENTION**

Use only the specified or **technically equivalent** materials from BRP-Rotax for all maintenance work. When handling chemicals, comply with all the customary regulations and specifications of the producer, including the expiry date and instruction.

**NOTE**

*If necessary contact the manufacturer concerning the comparability of the consumable materials. In some cases information can be obtained from the local authorized distributors and service partners for ROTAX engines.*

**NOTE**

*Respect the manufacturers instruction concerning the curing time and the expire date of the particular surface sealing compound.*

The materials specified have been tested for a long time and are suitable for all operating conditions indicated by the manufacturer.

</tr>
</tbody>
</table>
ATTENTION

Use only approved cleaning agents (e.g. kerosine, varsol, etc.) for cleaning all metal parts.

Do not use lye-based cold cleaner or degreasing agents. Do not clean coolant or oil hoses with aggressive solutions. Clean off sealing compound residue with sealant remover. Soak combustion chamber, piston and cylinder head with cleaning agent and remove combustion residues with a bronze brush. Very good results have been achieved with “Clenvex 2000”. It is a solvent-cold cleaner, free of halogen, on the basis of selected fuel fractions with tensides and is biologically disposable. Never use caustic or corrosive cleaning.

## INSPECTION AND SERVICING INTERVALS OF THE ENGINE COMPONENTS

### Safety note

⚠️ WARNING  
Non-compliance can result in serious injuries or death!  
All repair and maintenance work must only be carried out by a qualified technician.

<table>
<thead>
<tr>
<th>Points of inspection</th>
<th>Interval Operating hours</th>
<th>Chapter Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inspection, remedial action</td>
<td>as indicated</td>
<td></td>
</tr>
</tbody>
</table>

### 1) General

- Inspect spark plug, replace if necessary  
  Interval: Inspect before every operation of vehicle
- Replace spark plug.  
  Interval: Every 25 hours of operation

### 2) Cooling system

- Check coolant level.  
  Interval: Inspect before every operation of vehicle
- Inspect water pump for sealing, in the event of egress of oil or coolant from the overflow orifice, have the pump repaired by an authorised service center.  
  Interval: Inspect before every operation of vehicle
- Inspect the cooling water connections on the cooler housing and cylinder head cover for tightness and sealing.  
  Interval: Inspect before every operation of vehicle
- Inspect the radiator hoses and hose clamps on the engine and radiator for tightness and sealing.  
  Interval: Inspect before every operation of vehicle

### 3) Carburetor and intake silencer

- Inspect the carburetor connections to the engine and to the intake silencer for tightness.  
  Interval: Immediately after every collision
- Clean the filter element in the intake silencer and lubricate with air filter oil, replace damaged filter element.  
  Interval: Every 10 hours (depending on the conditions of use)

</tr>
</thead>
<tbody>
<tr>
<td>Inspection, remedial action</td>
<td>as indicated</td>
<td></td>
</tr>
</tbody>
</table>

### 4) Fuel system
- Inspect fuel filter for dirt, replace if required. 
  - Inspect before every operation of vehicle
- Inspect fuel screen from the carburetor.
  - Every 10 hours of operation

### 5) Exhaust system
- Inspect exhaust system for sealing and tightness, lubricate with oil to prevent corrosion.
  - Inspect before every operation of vehicle
- Replace the silencer matting in the exhaust system.
  - Every 10 hours of operation

### 6) Outlet control
- Clean the exhaust valve and check for free movement.
  - Every 10 hours of operation

### 7) Gearbox
- Check the oil level, top up if necessary.
  - Every 2 hours of operation
- Renew gear oil.
  - Every 5 hours of operation

### 8) Starter drive
- Inspect for wear, replace if necessary.
  - Every 50 hours of operation (depending on the conditions of use)

### 9) Clutch
- Inspect clutch drum needle bearing for wear, replace if necessary.
  - Every 10 hours of operation
- Clean the sealing groove in the starter gear assy.
  - Every 10 hours of operation

### 10) Engine inspection
- Engine inspection by authorized service center, replace defective parts.
  - Every 50 hours of operation

PREPARATION FOR REMOVAL

Safety instructions

⚠️ WARNING

Danger of severe burns and scalds!
Always allow the engine to cool down to ambient temperature before starting any work.

REMOVAL OF THE IGNITION SYSTEM

Safety instructions

⚠️ WARNING

Risk of electric shock!
Ignition "OFF" and system grounded! Disconnect negative terminal of battery.

NOTE

When disconnecting the battery be sure to always disconnect the negative terminal before the positive terminal. Remember that when the engine is running the ignition system has a high voltage of 35 kV; the spark plug therefore must not be removed with the engine running.

Instruction

Proceed as follows to disconnect battery. See Figure: Battery.

1. Remove the Allen screw with rounded flange head M6x20 (3) with O-ring 5x2 (2).

2. Remove the battery cover (1).

3. Disconnect the negative battery terminal (5).
Instruction

See Figure: Ignition system

4. Pull the spark plug connector (1) off the spark plug. Minimum removal force 30 N.
5. Remove the cable tie (14).
6. Disconnect the plug connections (6) on the ignition coil (2).
7. Disconnect the plug connection (7) on the solenoid valve (5).
8. Remove the plastic screw M6x25 (12) from the shift contact assy. Loosen the contact wire (11).
9. Loosen 2 Allen screws M6x25 (8) to release the protection shield (9) from the pick up sensor (3).
10. Disconnect the connector (10) for the pick up sensor (3)
11. Disconnect the connector (13) for the starter (4).

REMOVAL OF THE FUEL LINE

Safety instructions

⚠️ WARNING

Danger of explosion and ignition!
Overflowing and spoilt gasoline must be absorbed immediately with a binding agent and correctly disposed. Do not work with open flames and sources of ignition. Fuel must not come into contact with hot parts such as engine or exhaust since this may cause a fire!

Instruction

Proceed as follows to remove the fuel line:

1. Pull off fuel line (2) from the fuel pump (1).

Figure 3.4: Fuel components

1 Fuel pump
2 Fuel line
3 Impulse hose
4 Fuel filter
REMOVAL OF THE BOWDEN CABLE

Instruction

Proceed as follows to remove the Bowden cable:

1. Remove the carburetor cover (1).
2. Release the nipple screw from the slide.
3. Disconnect the Bowden cable (2) from the nipple screw (3).

Figure 3.5: Bowden cable

1 Carburetor cover 2 Bowden cable
3 Nipple screw

REMOVAL OF THE OVERLOAD CLUTCH

See Figure: Overload clutch.

1. Release the wheel-side clamping ring (2).
2. Loosen the 6 Allen screws M5x25 (4) evenly and remove the coupling flange assy (1).
Figure 3.6: Overload clutch

1. Coupling flange assy.
2. Clamping ring
3. Allen screw M6x25
4. Allen screw M5x25

REMOVAL OF THE SHIFT MECHANISM

See Figure: Shift mechanism.

1. Push out the locating pin and release the bowden cables (1) from the shift contact guidance (2).
2. Remove spring-loaded shift actuator.
3. Loosen the hex screw M6x12 on the retaining plate (5) and remove along with the spring washer (6).
4. Set the thrust washers and spiral spring (4) to one side.
Figure 3.7: Shift mechanism

REMOVAL OF THE ENGINE FROM KART CHASSIS

General
Loosen the engine from chassis following the chassis manufacturer's instruction. Remove both screws (engine clamps) and disconnect all cables.

NOTE
The engine must not be removed from the chassis to repair the following parts:

- Centrifugal clutch
- Cylinder with combustion chamber insert and cylinder head cover
- Exhaust valve
- Reed valve
- Piston
- Starter
- Oil Service
Figure 3.8: Engine clamp (Illustration similar)

1 Engine clamp

POSITIONING THE ENGINE ON THE TRESTLE MOUNTING PLATE

General

<table>
<thead>
<tr>
<th>ATTENTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not use flammable liquids and aggressive cleaning agents to clean the engine.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ENVIRONMENTAL NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Generally comply with standard rules for handling of chemicals. Dispose of chemicals as per local environmental regulations. Cleaning the engine removes fuel and oil residues and other environmentally damaging substances. The waste liquid must be caught and disposed in an environmentally compatible method.</td>
</tr>
</tbody>
</table>
The following special tools and equipment are required:

<table>
<thead>
<tr>
<th>Part no.</th>
<th>Description</th>
<th>Field of application</th>
</tr>
</thead>
<tbody>
<tr>

<td>Trestle mounting plate (trestle support)</td>
<td>Engine</td>
</tr>
<tr>
<td>676052</td>
<td>Fixing plate for engine</td>
<td>Engine</td>
</tr>
</tbody>
</table>

Instructions

Proceed as follows to position the engine on the trestle mounting plate:

1. Engine cleaning.
2. Unscrew the base plate from the engine, position the engine on the trestle mounting plate, and fix it securely with the 4 fixing screws.
PREPARATION FOR INSTALLATION

Safety instructions

ATTENTION

Clean and inspect disassembled parts and assemble them in accordance with the instructions. All screws and nuts must always be clean. Inspect surfaces and threads for damage. In case of doubt use new screws and nuts.

REMOVING THE ENGINE FROM THE TRESTLE MOUNTING PLATE

Instructions

Proceed as follows to remove the engine from the trestle mounting plate:

1. The engine is removed in reverse order of positioning.
   See also Chapter Positioning the engine on the trestle mounting plate.

INSTALLATION OF THE ENGINE ON KART CHASSIS

Safety instructions

⚠️ WARNING

Non-compliance can result in serious injuries or death!
Before installing the engine on the chassis the Installation and Operators Manual for the engine and the installation instructions of the chassis manufacturer must be read and understood.

For the Installation of the engine on kart chassis, see latest current Installation and Operators Manual of the engine type 125 MAX DD2.

Contents
This chapter describes the disassembly and assembly of the cylinder components of the ROTAX® 125 MAX DD2 evo engine. The description is divided into sections.
Overview

Position on the engine

Figure 4.1

1 Cylinder
2 Cylinder head cover
3 Intake socket
4 E-Rave cover
5 Exhaust socket assy.
CYLINDER REMOVAL

General

⚠️ WARNING

Danger of severe burns and scalds! Always allow the engine to cool down to ambient temperature before starting any work.

NOTE

If only the components in the crankcase are to be replaced or inspected, then the cylinder can be removed completely together with the following parts:

- Cylinder head cover
- Intake socket
- E-Rave
- Exhaust socket assy.
- Spark plug

The exhaust socket, carburetor flange and exhaust valve remain installed.

Preparation

The following preparation is required before removal:

- Removal of the radiator and radiator hoses. See also Chapter 3.
- Removal of the carburetor and intake silencer. See also Chapter 6.
- Removal of the exhaust system. See also Chapter 8.

Instructions

ATTENTION

Drain the coolant from the cylinder and invert the engine to prevent entry of water into the crankcase.

ATTENTION

Do not damage the piston, piston ring and wall when dismantling these components.

Special tools

The following special tools and equipment are required:

<table>
<thead>
<tr>
<th>Part no.</th>
<th>Description</th>
<th>Field of application</th>
</tr>
</thead>
<tbody>
<tr>
<td>676110</td>
<td>Socket set</td>
<td>Cylinder</td>
</tr>
</tbody>
</table>
Instruction

See Figure: Cylinder. Proceed as follows to remove the cylinder:

1. Remove the cylinder with the socket set by unscrewing the four M8 collar nuts from the crankcase.
2. Remove the cylinder (1) from the crankcase.
3. Remove the cylinder base gasket (2).

Figure 4.2: Cylinder

1 Cylinder  
2 Gasket
DISASSEMBLING THE CYLINDER

General

NOTE

If only the components in the crankcase are to be replaced or inspected, then the cylinder can be removed complete with the peripheral components. The exhaust socket, carburetor flange and exhaust valve remain installed. See Chapter: Removal of the shift mechanism.

Proceed as follows to disassemble the cylinder:

REMOVAL OF THE SPARK PLUG

Instruction

1. Remove the spark plug connector.
2. Remove the spark plug with the spark plug socket.

REMOVAL OF THE CYLINDER HEAD COVER

Instruction

See Figure: Cylinder head cover.

1. Remove the cylinder head cover (1) by removing the 3 Allen screws (M6x25) (3) and 1 Allen screw M6x16 (4) from the cylinder.
2. Remove the cylinder head together with the gasket.

Figure 4.3: Cylinder head cover

1 Cylinder head cover 2 O-ring 105x2.5
3 Allen screw M6x25 4 Allen screw M6x16
REMOVAL OF THE THERMOSTAT

Instruction  See Figure: Thermostat.

1. Remove the coolant thermostat from the cylinder head cover (1) by removing the 2 TAPTITE screws M4x8 (6) on the thermostat retaining bracket (5).

2. Remove the compression spring (4).

3. Remove the thermostat (2) from the thermostat holder (3).

---

REMOVAL OF THE COMBUSTION CHAMBER INSERT

Instruction  See Figure: Combustion chamber insert.

1. Remove the combustion chamber insert (1) by unscrewing the 5 Hex screws M8x30 (4) with the lock washer (5) crosswise.

2. Lift away the combustion chamber insert with lower (2) and upper O-rings (3).
Figure 4.5: Combustion chamber insert

1. Combustion chamber insert
2. O-ring 64x2
3. O-ring 23.3x2.4
4. Hex. screw M8x30
5. Lock washer A8

REMOVAL OF THE EXHAUST SOCKET

Instruction

1. Remove the exhaust socket (1) from the cylinder (5) by unscrewing the 2 Allen. screws (3).
2. Remove the gasket (4).

Figure 4.6: Exhaust socket

1. Exhaust socket
2. Exhaust gasket
3. Allen screw M8x20
4. Gasket
5. Cylinder
REMOVAL OF THE INTAKE SOCKET AND REED VALVE

Instruction  
See Figure: Intake socket, Reed valve.

1. Remove the intake socket (6) with the 5 Allen screws M6x25 (4)(5).
2. Remove the reed valve (7) and gasket (8) from the cylinder.

---

Figure 4.7: Intake socket, Reed valve

8 Gasket

---

REMOVAL OF THE EXHAUST VALVE

General  
The engine has an electronically controlled magnet valve which is opening and closing at a certain rpm defined by the ECU. The opening rpm can be set to following:

- 9100 rpm if the additional ground cable on the battery box is disconnected.
- 8800 rpm if the additional ground cable is connected to the battery box.

The closed valve improves the performance in the low and mid range. In the upper rpm range the valve opens to reduce flow resistance of the exhaust gases. For a detailed explanation please visit our website and watch our animated video that will explain the function in detail: https://www.rotax-kart.com/de/Community/Videos/Rotax-125-MAX-evo-Engines/124-Rotax-E-RAVE

Instruction  
See Figure: Exhaust valve.

Proceed as follows to remove the exhaust valve:
1. Release the adjustment screw (1) with the O-ring (2).
2. Remove the 2 TAPTITE screws M5x25 (3).
3. Remove the valve cover (4) and the compression spring (5).
4. Lift away the outer hose spring (6).
5. Unscrew the exhaust valve piston (7).
6. Remove the inner hose spring (9) from the bellows (8), push out the valve bellows from the valve piston.
7. Release the valve rod housing (10) from the cylinder with the 2 Allen screws M6x25 (11) with spring washers (12). Remove the gasket (13).
8. Remove the exhaust valve (14) with O-ring (16) and stud (15).

Figure 4.8: Exhaust valve

- 1 Adjustment screw

REMOVAL OF THE PISTON

General

See Figure: piston.

<table>
<thead>
<tr>
<th>ATTENTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>In order to protect the piston pin circlip from unintentional loss, a suitable clean cloth should be used to cover the open cylinder bore in the crankcase.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ATTENTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Always support the piston with the hand in order to avoid a bending moment or damage of the surface.</td>
</tr>
</tbody>
</table>

Special tools

The following special tools and equipment are required:

<table>
<thead>
<tr>
<th>Part no.</th>
<th>Description</th>
<th>Field of application</th>
</tr>
</thead>
<tbody>
<tr>
<td>676035</td>
<td>Insertion tool</td>
<td>Piston</td>
</tr>
<tr>
<td>976380</td>
<td>Circlip puller</td>
<td>Circlip</td>
</tr>
</tbody>
</table>

Instructions

Proceed as follows to remove the piston:

1. Pull out the circlip (2) with the circlip puller (1). Use safety goggles to protect your eyes!
2. Press the piston pin (4) out of the piston with the point of the special tool (3).

Figure 4.9: Piston

1. Circlip puller
2. Circlip
3. Special tool part no. 676035
4. Piston pin
ATTENTION

Components, which have reached or exceeded their wear limits, must be replaced. Components, which are found to be defective in the context of the visual inspection and might influence the engine’s performance, must also be replaced.

INSPECTION OF CYLINDER COMPONENTS

Instructions  
See Figure: Cylinder.

Preparation  
The following preparation is required before removal.

1. Remove lime deposits (1) from the water cooling of the cylinder.
2. Clean combustion residues from the exhaust valve and slider duct (2).
3. Clean O-ring groove (3).
4. Inspect all threads.
5. All sealing surfaces must be clean and smooth.
6. Inspect the cylinder bore for abnormal wear.
7. Inspect the impulse bore (4).

Figure 4.10: Cylinder

1 Water duct  
2 Exhaust valve port  
3 Groove for O-ring  
4 Impulse bore
INSPECTION OF PISTON AND PISTON RING

Instructions

See Figure: Piston and piston ring.

1. Inspect the piston for cracks and signs of piston seizure.
2. Inspect the bore of the piston pin for damage and wear.
3. Inspect the piston pin ring groove for defects.
4. Check free of movement of the piston ring in the ring groove.

NOTE

If carbon prevents free movement of the piston ring, the ring groove can be cleaned out with a discarded piston ring.

5. Measure the piston ring clearance in the ring groove with a feeler gauge (1).

NOTE

If the piston ring clearance has reached the wear limit of 0.1 mm, the piston must be replaced.

6. Remove the piston ring from the piston, insert it approx. 10 mm from top into the cylinder (use the piston to do so) and check ring-end gap by means of a feeler gauge.

7. Measure clearance with a feeler gauge.

NOTE

If the wear limit of 0.8 mm has been reached the piston ring must be replaced.

8. Check the piston ring locking pin for wear.

Figure 4.11: Piston and piston ring

1  Feeler gauge       2  Piston ring
INSPECTION OF THE PISTON DIAMETER

Instructions

1. Measure the piston diameter with a micrometer (1). Conditions of measurement: room temperature = 20 °C, measuring point 20 mm from the lower edge of the piston, perpendicular to the piston pin axis.

2. Determine the piston to cylinder clearance. The wear limit is 0.08 mm.

NOTE

The piston clearance of a new piston/cylinder pairing should be 0.04 - 0.05 mm.

Figure 1.12: Piston diameter

1 Micrometer
INSPECTION OF THE PISTON AND CYLINDER SIZING

General

NOTE

Every new piston has the size classification and a production letter printed on the top of the piston (piston crown).

NOTE

Every new cylinder has the size classification stamped on the upper sealing surface.

Measuring the cylinder diameter:

1. Measure the cylinder diameter 10 mm below the upper edge of the cylinder. This dimension indicates the selection of the matching piston. If the dimension has reached the wear limit of 54.045 mm, the cylinder must be replaced.

2. Measure the piston diameter as described in chapter 4 “Inspection of the piston diameter” and install a piston to match the required clearance at 0.060 mm +/- 0.005 mm between piston and cylinder.

INSPECTION OF THE PISTON PIN, CIRCLIP

Instructions

See Figure: Piston pin, circlip.

1. Inspect the piston pin (1) for wear and discoloration.
2. Check the needle cage (2) for cracks and abrasion.
3. The circlips (3) are replaced at every repair. Notice the position of the circlip.

NOTE

*Direction of circlips is up or downside direction.*

Figure 1.13: Piston pin, circlip

1. Piston pin  
2. Needle cage  
3. Circlip
INSPECTION OF THE SPARK PLUG

Instructions

1. Inspect spark plug connector for cracks, burn-off, dampness and fouling.

2. Visual inspection of the spark plug for carbonization, oil fouling and discoloration of the electrode.
   - Pos. 1 = normal
   - Pos. 2 = fouled
   - Pos. 3 = insulator breakage
   - Pos. 4 = melted electrode
   - Pos. 5 = oil carbon / deposits

3. Check the electrode gap of the spark plug with a feeler gauge and adjust if required to $s = 0.45 \text{ mm}$ to $0.7 \text{ mm}$.

**ATTENTION**

Pay attention to the electrode gap, mentioned in the technical regulation! Bending the electrode can cause damage or misfire.

Figure 1.14: Spark plug

1 Spark plug 2 Electrode
INSPECTION OF THE CYLINDER HEAD COVER

Instructions  

See Figure: Cylinder head cover.

1. Inspect cylinder head cover for cracks (visual inspection).

2. Inspect the contact surfaces of the two O-rings (1 and 2) for good condition (max. depth of wear 0.05 mm).

![Figure 1.15: Cylinder head cover](image)

1, 2 O-ring contact area

---

INSPECTION OF THE COMBUSTION CHAMBER INSERT

Instructions  

See Figure: Combustion chamber insert.

NOTE

The sealing area of the combustion chamber insert is slightly tapered from Ø 63 mm.

1. Clean combustion residues and lime deposits from the outer area (1) of the combustion chamber.

2. Inspect combustion chamber insert for cracks (visual inspection).

3. Make sure that spark plug thread (3) is in good condition.

4. Inspect sealing surfaces for flatness and damage.
INSPECTION OF THE EXHAUST SOCKET

Instructions

See Figure: Exhaust socket.

1. Inspect the exhaust socket for damage or deformation.
2. Inspect exhaust gasket (2) for wear and replace if applicable.
INSPECTION OF THE CARBURETOR FLANGE AND REED VALVE

General

ATTENTION
The reed petal should be completely on the valve guide with a little initial tension (a gap should not be visible when held against the light. If applicable adjust reed valves more precisely by releasing the tightening torque of the screws.

Instructions

See Figure: Carburetor port and valve guide.

1. Inspect rubber lining of reed valves (1) for perishing (if applicable replace complete reed valve).
2. Check the two reed petal (2) for cracks or damage.
3. Check the oval head screw M3x6 (3) for secure seating. (LOCTITE 648 Tightening torque 1.5 –2 Nm (13-18 in.lb)).
4. Inspect carburetor flange (4) for cracks, porosity or swelling and replace if applicable.

Figure 4.18: Carburetor port and valve guide

1 Reed valve assy. 2 Reed petal
3 Oval head screw M3x6 4 Intake socket
INSPECTION OF EXHAUST VALVE

See Figure: Exhaust valve.

1. Clean oil or oil deposits from all parts with a suitable cleaning agent.

2. Check the smooth movement of the exhaust valve (1) in the cylinder, if applicable remove carbon deposits on the outlet valve and in the cylinder.

3. Inspect condition of O-ring (2).

4. Check that the impulse bore in the valve rod housing (3) is open and check the oil seal (4).

5. Inspect bellows (5) for cracks or porous areas and replace if applicable.

6. Inspect exhaust valve piston (6) for cracks or deformation by caused overheating and replace if applicable.

**NOTE**

Overheating may be caused by leaks.

7. Inspect valve cover for cracks (7) or deformation caused by overheating.

---

CYLINDER COMPONENTS INSTALLATION

INSTALLATION OF EXHAUST VALVE

NOTE

Make sure that the components are in their correct position.

Special tools

The following special tools and equipment are required:

<table>
<thead>
<tr>
<th>Part no.</th>
<th>Description</th>
<th>Use</th>
</tr>
</thead>
<tbody>
<tr>
<td>899788</td>
<td>LOCTITE 648</td>
<td>Stud</td>
</tr>
<tr>
<td>276070</td>
<td>Installation tool</td>
<td>Valve bellows spring</td>
</tr>
</tbody>
</table>

Instruction

See Figure: Exhaust valve.

Proceed as follows to install the exhaust valve:

NOTE

If the exhaust valve or the stud bolt is replaced, the stud bolt must be secured with LOCTITE 648 in the exhaust valve.

1. Lock exhaust valve (1) and stud M6x52.5 (2) with LOCTITE 648.
2. Wipe away the surplus LOCTITE.
3. Make sure the bolt is screwed in completely. Tightening torque 10 Nm (90 in.lb).

Figure 4.20: Exhaust valve.

1 Exhaust valve
2 Stud M6x52.5
3 O-ring 6x2.5 RED
INSTALLATION OF EXHAUST VALVE, GASKET, VALVE ROD HOUSING

Exhaust valve, gasket, valve rod housing

1. Insert exhaust valve into the slot in the cylinder head (1). Pay attention on the installation direction and make sure that the valve is not ranging into the exhaust port!

2. Position the gasket (4), making sure that the impulse bore on the cylinder is not covered. Note the installation direction!

3. Insert the valve rod housing (5). Coat both side of oil seal (6) with Engine oil and insert into the valve rod housing.

4. Screw in 2 Allen screws M6x25 (7) and spring washers (8) onto the cylinder (1) and tighten.

5. Check the movement of the exhaust valve.

6. Tighten Allen screws (7). Tightening torque 10 Nm (90 in.lb).

---

INSTRUCTION OF THE EXHAUST VALVE PISTON

General

In order to protect the piston pin circlip from unintentional loss in the crankcase, a suitable clean cloth should be used to cover the open cylinder bore.

Instruction

See Figure: Exhaust valve piston.

1. Degrease the valve rod housing (1), bellows (2) and exhaust valve piston (3).

2. Pull the small hose spring (4) over the bellows.
3. Fit the bellows over the valve rod housing (1). The bead of the bellows must engage in the groove in the valve rod housing.

4. Tighten the exhaust valve piston (3) into the valve rod housing (1). Tightening torque 1.2 Nm (10.6 in.lb)

5. Tension the large hose spring (5) with installation tool part no. 276070.

6. Insert compression spring (6).

7. Tighten the valve cover (7) with 2 TAPTITE screw M5x25 (8).

8. Insert the O-ring 15.9-2.3 (9) into the valve cover.

9. Turn the adjustment screw (10) into the valve cover (7).

---

</tbody>
</table>

**NOTE**

Cover your eyes with safety goggles during this work!
Mount the piston with the locking pin of the piston ring facing the intake port.

**NOTE**
The piston pin is fixed in the piston with two circlips (left and right).

**ATTENTION**
Always use new circlips. Used or previously installed circlips have too little tangential tension, and they may twist and work their way out of the groove in the piston.

**NOTE**
For easier installation we recommend installing one circlip before installing the piston.

**Instruction**

See Figure: Piston pin.
Proceed as follows to install the piston pin:

1. Coat the piston pin needle cage (2) with Engine oil.
2. Insert the piston pin needle cage (2) into the upper connecting rod eye.
3. Mount the piston (3) and piston pin (4) on the con rod.
4. Place the new circlip (1) flat on a level surface.
5. Push the mounting sleeve (5) with the circlip over it.
6. Push the circlip deeper into the mounting sleeve with the tapered side of the installation tool (6).
7. Rotate the installation tool and continue to push the mounting sleeve until the circlip locks into the mounting sleeve groove.
8. Place the installation tool with the cutout of the circlip down on the piston (3).
9. Protect the piston with your hand and press into the piston with the hook ring.

**NOTE**
The installation tool centers itself in the piston pin.
NOTE

Check that the circlip is correctly seated in the piston.

Figure 4.23: Piston pin

6. Installation tool

INSTALLATION OF THE CYLINDER

General

ATTENTION

Use only the piston/cylinder pairings specified by the table in Chapter 4 Section 3.2. All other combinations may lead to engine damage.

Special tools

The following special tools and equipment are required:

<table>
<thead>
<tr>
<th>Part no.</th>
<th>Description</th>
<th>Field of application</th>
</tr>
</thead>
<tbody>
<tr>
<td>897651</td>
<td>LOCTITE 243</td>
<td>Stud bolts</td>
</tr>
</tbody>
</table>

Effectivity: 125 MAX DD2 evo
Edition - Febr. 01 2018 /Rev. 0
Instructions

Proceed as follows to install the cylinder head: See Figure: Cylinder head.

1. Coat the stud bolts (1) on the longer thread end with LOCTITE 243 and screw into the crankcase. Tightening torque 5 Nm (44.25 in.lb).

2. Position new cylinder base gasket (0.2 mm) (4). Determine the correct thickness of the base gasket (see Chapter 4 Section: Squish gap measurement) to adjust the squish gap to the correct value.

3. Coat cylinder bore and piston (2) with Engine oil.

4. Press piston ring into the piston with two fingers.

**ATTENTION**

Do not damage the gasket.

5. Position the cylinder (3) over the piston.

6. Screw cylinder crosswise to the crankcase with the four studs. Tightening torque 24 Nm (18 ft.lb).

---

**INSTALLATION OF THE EXHAUST SOCKET**

**Special tools**

The following special tools and equipment are required:

<table>
<thead>
<tr>
<th>Part no.</th>
<th>Description</th>
<th>Field of application</th>
</tr>
</thead>
<tbody>
<tr>
<td>297386</td>
<td>SILASTIC 732</td>
<td>Gasket</td>
</tr>
</tbody>
</table>

**Instructions**

See Figure: Exhaust socket. Proceed as follows to install the exhaust socket:
1. Coat both sides of the gasket with SILASTIC.

2. Fasten the exhaust socket (1) to the cylinder (5) with a new gasket (4) and 2 Allen screws M8x20 (3). Tightening torque 20 Nm (177 in.lb).

3. Check that the exhaust port is tightly seated on the cylinder.

![Exhaust socket diagram]

**Figure 4.25: Exhaust socket**

1 Exhaust socket assy. 2 Exhaust gasket 3 Allen screws M8x20 4 Gasket 5 Cylinder

---

**INSTALLATION OF THE CARBURETOR FLANGE AND REED VALVE**

**Special tools**

The following special tools and equipment are required:

<table>
<thead>
<tr>
<th>Part no.</th>
<th>Description</th>
<th>Field of application</th>
</tr>
</thead>
<tbody>
<tr>
<td>899788</td>
<td>LOCTITE 648</td>
<td>Screw locking</td>
</tr>
</tbody>
</table>

**Instructions**

See Figure: Carburetor flange and reed valve

Proceed as follows to install the exhaust socket:
ATTENTION

The reed petal mounted on the reed valve must be fixed in precisely the correct installation position. Incorrect positioning of this valve leads to disturbed running of the engine due to incomplete combustion.

ATTENTION

The reed petal is bent, not flat. It must be fixed with the concave facing the valve guide. If the valve guide with the correctly fitted reed valve is held up to the light, it must not be possible to see through it.

1. Attach the reed petal (2) and the valve detent (3) to the valve guide using recessed head screws (4). Use LOCTITE 648 to lock the screws.

2. Position the gasket (5) on the cylinder.

3. Position the reed valve (1) and intake socket (6) and fasten together with the support bracket (7) using 5 head screws M6x25 (8)(9). Tightening torque 7 Nm (62 in.lb).

Figure 4.26: Carburetor flange and reed valve

INSTALLATION OF COMBUSTION CHAMBER INSERT

General

NOTE

*Note the installation position of the combustion chamber insert (2) - “Made in Austria” points to the exhaust port.*

Instructions

See [Figure: Combustion chamber insert](#).

Proceed as follows to install the combustion chamber insert and cylinder head cover:

1. Position O-ring (2) in the groove of the cylinder.
2. Tighten combustion chamber insert (2) crosswise with 5 hex screws (4) and with lock washers (5) to 5 Nm initially, ensuring that the O-ring (3) is not crushed. Tighten to tightening torque 30 Nm (22 ft.lb).

![Combustion chamber insert diagram](#)

INSTALLATION OF CYLINDER HEAD COVER

Special tools

The following special tools and equipment are required:

<table>
<thead>
<tr>
<th>Part no.</th>
<th>Description</th>
<th>Field of application</th>
</tr>
</thead>
</table>
| 897651   | LOCTITE 243 | Screw locking

Preparation

The following preparation is required before installation:

- Installation of the coolant thermostat:
Instructions

See Figure: Coolant thermostat.

Installation of the coolant thermostat:

1. Install thermostat (2) with collar nut M8 (3), compression spring (4) and thermostat retaining bracket (5) with 2 screws (6). Lock screws with LOCTITE 243.

![Diagram of coolant thermostat]

Figure 4.28: Coolant thermostat

1 Cylinder head cover red 2 Thermostat 45 degree celcius
3 Collar nut M8 4 Compression spring
5 Thermostat retaining bracket 6 TAPTITE screw M4x8

Instructions

See Figure: Combustion chamber insert.

Proceed as follows to install the combustion chamber insert:

2. Position O-ring (1) on the combustion chamber insert.

3. Grease the O-ring (2) lightly to ensure that it adheres better to the groove of the cylinder head cover, otherwise fix it with sealant (Silastic).

4. Insert O-ring (2) into the groove of the cylinder head cover (3).

5. Tighten the cylinder head cover (3) crosswise with 4 Allen screws M6x25 (4). Tightening torque 10 Nm (90 in.lb).
INSPECTION AND ADJUSTMENT OF SQUISH GAP

General

NOTE

The gap between the piston (at the TDC of the piston) and the combustion chamber insert (= “squish gap”) is partly responsible for the power characteristics of the engine and responsible for smooth running.

NOTE

The smaller the squish gap the higher the engine compression. This means that the engine response to the feed from the carburetor becomes more critical under changing operating conditions (temperature, air pressure, humidity).

Special tools

The following special tools and equipment are required:

<table>
<thead>
<tr>
<th>Part no.</th>
<th>Description</th>
<th>Field of application</th>
</tr>
</thead>
<tbody>
<tr>
<td>580130</td>
<td>Solder 2 mm</td>
<td>Combustion chamber</td>
</tr>
<tr>
<td>580132</td>
<td>Solder 3 mm</td>
<td>Combustion chamber</td>
</tr>
<tr>
<td>n.a.</td>
<td>Vernier caliper</td>
<td>Solder</td>
</tr>
</tbody>
</table>

Instructions

See Figure: Crankcase.

1. Use a coin to remove plug screw M18x1.5 together with the O-ring.
2. Screw a M8 bolt into crankshaft and rotate it by hand until the piston is approx. 5 mm below TDC.

![Crankcase diagram](image)

Figure 4.30: Crankcase

1. Crankcase  
2. Coin

3. Bend the solder as shown in the following picture and insert through the spark plug thread into the combustion chamber until the solder is in contact with the cylinder bore. The squeeze edge must always be measured in the direction of the axis of the piston pin. The result of a measurement of the squeeze edge in the direction of the exhaust port will be falsified by the tilt of the piston and is not approved.

4. Remove the solder from the combustion chamber and measure the thickness at the very end (= “squish gap”) of the crushed end of the solder with a vernier calliper.
Figure 4.31: Squish gap measurement

1 Solder 2 Vernier caliper

NOTE

A vernier calliper with an accuracy of min. 1/100 mm is required for this measurement.

ATTENTION

The squish gap must be within the specified tolerance.

You find the latest valid reglement on:
www.rotax-kart.com/de/Max-Challenge/MAX-Challenge/Regulations.

NOTE

We recommend setting a squish gap in the upper tolerance range of the relevant model.

NOTE

The squish gap can be set to a different thickness with cylinder base gaskets. Cylinder base gaskets are available 0.2 mm (0.008 in.), 0.3 mm (0.01 in.), 0.4 mm (0.015 in.), 0.5 mm (0.02 in.) and 0.8 mm (0.03 in.) thick.

Example

A cylinder base gasket 0.5 mm (0.02 in.) thick has been installed. With this cylinder base gasket a squish gap of 0.8 mm (0.03 in.) was measured. A cylinder base gasket 0.8 mm thick is required to set the required value, e.g. 1.1 mm (0.043 in.). Of course a 0.5 mm (0.02 in.) and a 0.3 mm (0.01 in.) seal can be installed. If it is necessary to install a cylinder base gasket with a different thickness, the cylinder can be completely removed by unscrewing the four studs. Follow the directions in the “Installation of the cylinder” chapter for installation of the cylinder. All the components attached to the cylinder (intake socket, exhaust socket) can remain on the cylinder.
Keep in mind that the gasket will settle and reduce the squish over time.

INSTALLATION OF SPARK PLUG

Instructions Proceed as follows to install the spark plug:

1. Screw in spark plug hand-tight and use tightening torque to tighten it with 27 Nm (20 ft.lb).
Contents

This chapter describes the disassembly and assembly of the crankcase of the ROTAX® 125 MAX DD2 evo engine.

REMOWAL OF THE CRANKCASE

Safety information

⚠️ WARNING

Danger of severe burns and scalds! Always allow the engine to cool down to ambient temperature before starting any work.

Preparation

The following preparation is required before removal:

1. Removal of ignition system. See also Chapter 3).
2. Removal of the fuel line. See also Chapter 3).
3. Positioning the engine on the trestle mounting plate. See also Chapter 3).
4. Drain oil. See also Chapter 4).
5. Removal of cylinder head. See also Chapter 4).
6. Removal of carburetor. See also Chapter 6).
7. Removal of starter. See also Chapter 7).
8. Removal of radiator. See also Chapter 8).
DISASSEMBLING THE CRANKCASE

Special tools
The following special tools and equipment are required:

<table>
<thead>
<tr>
<th>Part no.</th>
<th>Description</th>
<th>Field of application</th>
</tr>
</thead>
<tbody>
<tr>
<td>276016</td>
<td>Puller assembly</td>
<td>Case halves</td>
</tr>
<tr>
<td>n.a.</td>
<td>Plastic hammer</td>
<td>Crankshaft</td>
</tr>
</tbody>
</table>

Instructions
See Figure: Crankcase.

NOTE

Use two hex. screws to separate the case halves

1. Unscrew all Allen screws M6x45 (2) and remove them.
2. Remove engine housing from trestle mounting plate.
3. Screw 3 Cyl. bolts M8x70 into the left side crankcase as a support.

Figure 5.3: Crankcase

1. Crankcase
2. Allen screws M6x45
3. Cyl. screws M8x70

4. Screw 2 jack screws M6x60 (1) evenly into the thread and initiate housing separation.
5. Separate the housing halves by specific strokes with a plastic hammer.

![Figure 5.4](ka_125_0175)

Figure 5.4

1. Allen screw M6x60 (jack screw)

Lay the gearbox housing aside, remove the gasket and the components out of the crankcase in the following order:

6. Remove the idle gear 81 T (2).

7. Pull the shifting sleeve (3) from hollow shaft (5) and the shift fork assy. (4) out of the crankcase.

8. Pull or knock the hollow shaft (5) carefully out of the ball bearings.

**NOTE**

Do not damage the shaft seal, otherwise it must be renewed!

9. Remove the idle gear (6).

10. Remove needle bearings (7) and plain bearings (8) of the idle gears from the hollow shaft (5).
11. Pull the crankshaft assy (1) out of the ball bearings.
12. Pull or knock the primary shaft (2) carefully out of the ball bearings.
INSTALLATION OF THE CRANKSHAFT REPAIR KIT

DISASSEMBLING OF THE CRANKSHAFT

Safety instructions

⚠️ WARNING

Non-compliance can result in serious injuries or death!
Be particularly careful when working with a tool such as a hydraulic press, and follow the instructions of the manufacturer. All repair and maintenance work must only be carried out by a qualified technician. Generally speaking, we advise to read manuals carefully and follow the instructions.

NOTE

The parts of the crankshaft repair kit are paired together and must therefore be exclusively used together.

NOTE

Before disassembling the crankshaft, clean the parts thoroughly with a cleaning agent (grease-free).

Special tools

The following special tools and equipment are required:

**NOTE**

Con rod parts are not part of the crankshaft repair jig (part no. 276051).
The crankshaft repair kit (con rod) is available at your ROTAX® Dealer.
### Part | Part no. | Description
--- | --- | ---
685011 | Crankshaft repair kit (1x)  
consisting of:  
| 1 | 217431 | Con rod (1x)  
| 2 | 221162 | Con rod pin (1x)  
| 3 | 232884 | Needle bearing (1x)  
| 4 | 227731 | Thrust washers (2x)

---

**Figure 5.8: Con rod parts**

1. Con rod  
2. Con rod pin  
3. Needle bearing  
4. Thrust washer (2x)

---

**Instructions**

See [Figure: Disassembling of the crankshaft.](#)

**NOTE**

Position the con rod above the bore of the bottom of the crankshaft repair jig. Otherwise the con rod pin, the crankshaft half or the bottom section may be damaged.

1. Push thrust plate (2) between the two halves of the crankshaft.
2. Position the crankshaft on the thrust plate (3) on bottom section of the tool (4) and make sure that the crankshaft matches the bore in the bottom section at the crankshaft repair jig (4).
3. Position the thrust pin (5) on the connecting rod pin and press the crankshaft apart.
NOTE

Take an available con rod pin (6) and push the old con rod (7) with needle bearing and thrust washer onto the con rod pin. Note the installation instructions.

4. Take the gearbox-end of the crankshaft half (8) and repeat the procedure.

Figure 5.9: TYPICAL – Disassembling of the crankshaft

8  Drive side of the crankshaft half
INSPECTION OF THE CRANKSHAFT

General
• Thoroughly clean the crankshaft with a grease-free cleaning agent.

Instructions
See Figure: Crankshaft measurements.

1. Inspect the crankshaft for visible damage and traces of wear:
   • Cone/centered thread
   • Bearing seats
   • Running surface of the bearing
   • Contact surface of the shaft seals
   • Woodruff key groove

Measuring the crankshaft

2. Measure values for the two main bearing seats (CS01), the bearing surface of the clutch (CS02) and of the piston pin (CS03).

3. Determine the axial play of the con rod bearing (CS04) using a feeler gauge.

4. Check the specific dimension (CS07).

5. Determine the radial clearance of the connecting rod bearing (CS05).

6. Check the run out of the crankshaft (CS06).

NOTE
If one of the wear limits CS01 or CS02 is reached, the complete crankshaft must be replaced.

NOTE
If one of the wear limits CS03, CS04 or CS05 is reached, BRP-Rotax recommends use of the applicable repair kit. See also Chapter 5 Figure: Con rod parts.

NOTE
If the maximum approved stroke (CS06) of the crankshaft is exceeded, the crankshaft must be realigned. See also Chapter 5 Figure: Crankshaft measurements.
Figure 5.10: Crankshaft measurements

</tbody>
</table>
**CRANKSHAFT NOT IN SPECIFICATION**

**General**

**NOTE**

*If the crankshaft is not 100% aligned or exceeds the tolerance, the crankshaft must be re-aligned. See CS 07.*

**Special tools**

The following special tools and equipment are required:

<table>
<thead>
<tr>
<th>Part no.</th>
<th>Description</th>
<th>Field of application</th>
</tr>
</thead>
<tbody>
<tr>
<td>276051</td>
<td>Crankshaft repair jig</td>
<td>Crankshaft</td>
</tr>
<tr>
<td>n.a.</td>
<td>Vise</td>
<td></td>
</tr>
</tbody>
</table>

**Instructions**

See **Figure: Aligning the crankshaft.**

1. To align the crankshaft, clamp the drive end or engine end of the crankshaft half (1) in a vise (2). Use a soft material to cover the crankshaft inside the vise to project the surface.

2. Use the lever (3) to lift up the upper half of the crankshaft.

3. The crankshaft can be aligned to the external diameter of the crankshaft webs with target strokes of an aluminum hammer.

---

Figure 5.11: Aligning the crankshaft

2. Vise
3. Crowbar
CRANKSHAFT - ASSEMBLY

General

NOTE

Clean the bore for the connecting rod pins of the gearbox-side crankshaft half with a cleaning agent (grease-free).

Special tools

The following special tools and equipment are required:

<table>
<thead>
<tr>
<th>Part no.</th>
<th>Description</th>
<th>Field of application</th>
</tr>
</thead>
<tbody>
<tr>
<td>n.a.</td>
<td>Press</td>
<td>Crankshaft</td>
</tr>
<tr>
<td>276051</td>
<td>Crankshaft repair jig</td>
<td>Crankshaft</td>
</tr>
<tr>
<td>899788</td>
<td>LOCTITE 648</td>
<td>Crank pin</td>
</tr>
</tbody>
</table>

Instructions

See Figure: Crankshaft assembly.

1. Apply LOCTITE 648 to the inside of the crank pin bore in both crankshaft halves.

   NOTE

   Remove excess LOCTITE after pressing in, otherwise adjacent parts may be damaged.

2. Insert the new con rod pin (5) into the crankshaft bore.

3. Place the sleeve (6) over it.
NOTE
Transfer the new con rod from the old con rod pin to the pressed–in (new) con rod pin in the crankshaft repair jig. (note the installation position).

4. Position the drive end crankshaft half (3) on the thrust plate (2) and press the new con rod pin (5) into the crankshaft until the con rod pin stops moving, then remove the sleeve (6).

5. NOTE
Before positioning the con rod on the pressed-in con rod pin check for:
- no corrosion damage
- no dirt or dust particles
- check that all bearing needles are present

Slide the new crankshaft assy. (7) with cage from the con rod pin (mounting device) onto the pressed-in con rod pin (5).

Figure 5.13: Crankshaft assembly

1 Press 2 Thrust plate
3 Drive end crankshaft half 4 Bottom section of the repair jig
5 Con rod pin 6 Sleeve
7 Crankshaft

Instructions
See Figure: Crankshaft assembly.

6. Slide the gearbox-end crankshaft half (1) into the bottom section of the tool (2).
7. Clean the drive end crankshaft web hole with cleaning agent (grease-free).

8. Coat the hole with LOCTITE 648.

**NOTE**
Remove excess LOCTITE, otherwise the con rod may be damaged.

![Crankshaft assembly diagram](image)

Figure 5.14: Crankshaft assembly

- 1 Crankshaft half (engine end)
- 2 Bottom section of the repair jig
- 3 Con rod pin
- 4 Con rod

9. Slide the drive-end crankshaft half (1) into the top section of the repair jig (2).

10. Hold the crankshaft half as shown in following Figure and push the top section of the tool (3) into the bottom section of the tool (2).

**NOTE**
A rotary movement of the con rod makes it easy to align the web hole with the con rod pin.

11. Position the thrust ring (4) on the top section of the repair jig and press the two crankshaft halves together (until the crankshaft pin is aligned with the crankshaft web).
Figure 5.15: Crankshaft assembly

CRANK CASE INSPECTION

INSPECTION OF THE HOUSING HALVES

Instructions

See Figure: Crankcase.

1. Clean both case halves with commercial detergents.
2. Check both halves (1) for cracks and damage (visual inspection).
3. Check sealing surfaces (2) for damage (visual inspection).
4. Check threads (3) for cleanliness and clearance.
5. Check that lubrication holes (4) are open and clean with compressed air as required.

Figure 5.16: Crankcase

1 Case halves
2 Sealing surfaces
3 Thread
4 Main bearing lubrication hole
INSPECTION OF THE GEAR WHEELS

Instruction

See Figure: Gear wheels.

1. Check the following gearbox components in the context of a revision of the engine for corrosion, damage or wear:
   • Gear wheels of primary shaft 24/19 T
   • Idle gear 81 T
   • Shifting sleeve and shift fork assy.
   • Plain bearing 40x44x20
   • Hollow shaft

2. Check for discoloration of components, in addition inspect the gearing for pitting. Blue color means that this part was subjected to massive heat and should be replaced.

Figure 5.17: Gear wheels

1 Primary shaft 24/19 T           2 Shift fork assy.
3 Needle bearing K 52x57x12       4 Idle gear 81 T
5 Plain bearing 40x44x20           6 Shifting sleeve
7 Idle gear 77 T                   8 Hollow shaft
CRANK CASE - ASSEMBLY

General

NOTE

Always replace old gaskets, circlips, O-rings and oil seals with new ones after disassembling.

Special tools

The following special tools and equipment are required:

INSTALLATION OR REPLACE SEALINGS

General Replace sealing rings if:
- they are damaged or leaking
- directly adjacent bearings must be renewed pairwise
- as part of an overhaul – Does not always have to be replaced.

Instruction See Figure: Display of oil seals.

1. Pull out the sealings from the bearing seats of the crankshaft, hollow shaft and shift fork/sleeve with a suitable tool.

2. Grease the new oil seal with Molykote 111 in the area of the sealing lip and install it with a suitable installation tool.

![Figure 5.18: Display of oil seals](image)

Figure 5.18: Display of oil seals

1 Oil seal AS 30x42x7/7.5
2 Oil seal ASL 50x68x8
3 Oil seal 12x22x7

CHECK OF THE BEARINGS

NOTE

Before the inspection, lubricate the bearings with engine oil.
If the bearing on one side is damaged, always replace the adjacent bearings too.
Always replace the according oil seal when replacing a bearing!

NOTE

If one of the bearings has to be replaced, then replace the shaft seal also.

Instruction See Figure: Check of bearing.
1. Turn the inner ring of the bearing (by hand), it must be easy and free to turn. The bearing must not be "noisy". If in doubt, replace the bearing to prevent any damage.

![Figure 5.19: Check of bearing](image)

---

### REPLACE OF BEARING

**WARNING**

Danger of severe burns and scalds!

Wear heat-resistant gloves during this process!

**ATTENTION**

Check for wear at the bearing support. If the press fit of the bearing in relation to the crank case is loose, replace the crank case half that is affected.

**NOTE**

Remove the components of the housing in order to avoid damage during the heating process.

**NOTE**

If the housing half that needs to be heated has dowel pins, drill corresponding holes into the wood or plastic plate to accommodate the pins after heating.

**Instruction**

See **Figure: Ball bearing**.

1. Heat up the housing halves with the defective ball bearings one after the other for 10 minutes at 150 °C (302 °F).
2. Take one housing half out of the oven in correct position and swing it lightly onto a flat surface, preferably of wood, then the defective ball bearing will pop out of the crank case by using only little force.

3. Clean the bearing seats carefully.

**NOTE**

Components must have cooled to room temperature (20 °C) (68 °F). Otherwise a measurement is not valid!

4. Measure the inner diameter of the bearing seat and the outer diameter of the bearing. The interference fit between the ball bearing and the bearing seat must be at least \( s = 0.01 \text{ mm} \).

5. Heat up the halves again to 150 °C (302 °F) for 10 minutes.

6. Lay a crank case half on a flat surface, lubricate bearing area with lithium-based grease.

7. Lubricate the ball bearings with engine oil and insert them into the bearing seats carefully. Do not tilt the bearing, otherwise you have to start again!

**NOTE**

Crankshaft main bearing: The closed cage side must face the crank web! See Figure: Crankshaft main bearing (next side). The bearing description must be visible!

---

**Figure 5.20: Ball bearing**

1. Ball bearing (crankshaft) 6206 TVH C4M
2. Ball bearing (hollow shaft) 6010 C3
3. Ball bearing (primary shaft) 6203 C3
4. Ball bearing (primary shaft) 6204 C3
Figure 5.21: Crankshaft main bearing

1 Ball bearing (crankshaft) 6206 TVH C4M
2 Ball bearing (hollow shaft) 6010 C3
3 Ball bearing (primary shaft) 6204 C3
INSTALLATION OF SHAFT AND GEARS

Preparation

See Figure: Crank case housing.
Put the crank case housing (ignition side) on the work bench!

1. Screw three Allen screw M8x70 evenly into the extraction thread and use them as pedestal.

Figure 5.22: Crankcase housing

Instruction

See Figure: Crankshaft assy., Primary shaft.

2. Insert the crankshaft (1) into the ball bearing of the gearbox housing (case).
3. Insert the primary shaft (2) carefully into the ball bearing of the gearbox housing (case).

Figure 5.23: Crankshaft assy, Primary shaft

Instruction

See Figure: Shafts and wheels.
Proceed as follows to installation the shafts and gears.

4. Assemble the hollow shaft with bearing sleeves, needle bearings, shifting sleeve, shift fork, idle gears and install it into the gearbox housing.
   - First install the hollow shaft (1) with the hexagonal end into the ball bearing of the gearbox housing - Avoid possible damage to the oil seal (7).
   - Pay attention to order and direction when installing the idle gears: First install the idle gear (5) (2.gear) onto the hollow shaft, then install the idle gear (9) (1.gear). Both idle gears indicate with the flat side to the shifting sleeve (4)!

5. Assemble the housing halves. Described in section Assembly of housing valves.

Figure 5.24: Shafts and wheels

1. Hollow shaft
2. Plain bearing 40x44x20
3. Needle bearing K 52x57x12
4. Shifting sleeve
5. Idle gear 77 T
6. Ball bearing 6010 C3
7. Oil seal ASL 50x68x8
8. Shift fork assy.
9. Idle gear 81 T
ASSEMBLY OF THE GEARBOX HOUSING

General

NOTE

When using new studs for the assembly of the cylinder, first screw the long side of the threaded studs into the housing and secure them with LOCTITE 243. Tightening torque 10 Nm.

When using new housing halves insert new dowel pins!

Instruction

ATTENTION

Pay attention on the different lengths of the Allen. screws!
Tighten the Allen. screws crosswise, start in the middle of the housing.

1. Insert a new housing gasket part no. 630522 included in the gasket set part no. 296162.
2. Mount both housing halves together with 12 Allen screws M6x45 (see mounting plan) together.
   Tightening torque 10 Nm.
3. Crankcase assy. – cool down.
4. Attach the crankcase assy. on trestle mounting plate with 4 attachment screws.

Figure 5.25: Mounting plan 1-12
5. Cut off the protruding section of the crankcase gasket with a sharp knife at the cylinder base surface.

**INSTALLATION OF CRANK CASE ASSY.**

**Final tasks**

1. Install cylinder assy. See Chapter 4).
2. Install balance drive and centrifugal clutch. See Chapter 7).
3. Take the engine off the assembly stand. See Chapter 3).
4. Install the engine in the kart chassis. See Chapter 3).
5. Filling the gear housing with oil. See Chapter 7).
6. Install the fuel line. See Chapter 3).
7. Install the exhaust system. See Chapter 9).
8. Install the carburetor and air filter. See Chapter 6).
9. Install the water pump hoses. See Chapter 8).
10. Install the ignition system. See Chapter 3).
Chapter: Chapter 6

Contents  
This chapter describes the removal and installation of the carburetor and intake silencer assembly for the ROTAX® 125 MAX DD2 evo engine. The description is divided into subsections.
SYSTEM DESCRIPTION

Overview

Position on engine

Figure 6.1: Position on engine

1. **Intake silencer**  
2. **Carburetor**  
3. **Fuel pump**  
4. **Fuel line**  
5. **Impulse pipe**
REMOVAL OF THE CARBURETOR AND INTAKE SILENCER

Safety instructions

⚠️ WARNING

Danger of explosion and ignition!
Overflowing and spoilt gasoline must be absorbed immediately with a binding agent and correctly disposed. Do not work with open flames and sources of ignition. Fuel must not come into contact with hot parts such as engine or exhaust since this may cause a fire!

Preparation

The following preparations should be carried out before removing the components: See Figure: Carburetor and intake silencer.

1. Pull off fuel pipe between the fuel tank and fuel pump from the fuel pump (4) and seal it with a screw.
2. Remove the Bowden cable. See also Chapter 3).

REMOVAL OF THE CARBURETOR, INTAKE SILENCER

Instruction

See Figure: Carburetor and intake silencer.

⚠️ ATTENTION

Fuel may spill out when removing the carburetor.

ENIRONMENTAL NOTE

Protect the environment!
Use a container to collect the fuel from the carburetor.

To remove the carburetor and intake silencer the following steps are required:

1. Remove the fuel line (1) between the fuel pump (3) and the carburetor.
2. Loosen the hose clamp (4).
3. Remove the carburetor along with the intake silencer (5).
Figure 6.2: Carburetor and intake silencer

1 Fuel line to the carburetor  
2 Impulse line  
3 Fuel pump  
4 Pipe clamp 51  
5 Intake silencer
REMOVAL OF THE FUEL PUMP

Instruction

See Figure: Fuel pump.

To remove the fuel pump the following steps are required:

1. Remove the fuel pump (1) from the retaining plate (5).

![Fuel pump diagram]

Figure 6.3: Fuel pump

1 Fuel pump
3 Lock nut M6
5 Retaining plate

2 Washer 6.4
4 Rubber buffer

DISASSEMBLY OF THE CARBURETOR

1. Disassembly of the carburetor to the parts shown in Figure: Carburetor and clean them with fuel.
Figure 6.4: Carburetor
DISASSEMBLY OF THE INTAKE SILENCER

Intake silencer See Figure: Intake silencer.

1. Disassemble the intake silencer to the parts shown in following Figure.

Figure 6.5: Intake silencer

8. Lock nut M6
9. Allen screw with rounded flange head M6x16
10. O-ring 59.52x2.62
CARBURETOR AND INTAKE SILENCER – INSPECTION OF COMPONENTS

In the case of problems with the fuel supply the carburetor should be checked:
First the components should be cleaned and then inspected.

INSPECTION OF THE CARBURETOR

Instruction

See Figure: Carburetor.

1. Clean the fuel filter (1) and make sure that it is in good condition.

2. Blow compressed air through the holes in the carburetor housing (2) and the jets (3, 4, 5, 6 and 7) and make sure that there is no pollution to have an easy and free flow.

3. Check that the clip (8) is tightly seated on the jet needle (9).

Figure 6.6: Carburetor

3 Needle jet DP 267
5 Main jet
7 Needle valve 150 (standard) 200 (optional)
9 Jet needle K 57

2 Carburetor housing
4 Idling and starter jets
6 Main jet cup
8 Clip
INSPECTION OF THE FUEL PUMP

General

NOTE

*Only the complete membrane and gasket set of the fuel pump can be replaced.*

Fuel pump gasket set: Part no. 296165

Instruction

See Figure: Fuel pump.

1. Check the condition of the impulse pipe (1), fuel line (2) and fuel overflow line (3) and in case of doubt replace them.

![Fuel Pump Diagram](image)

Figure 6.7: Fuel pump

1. Impulse pipe
2. Fuel line (from fuel tank)
3. Fuel line (to carburetor)

---

INSPECTION OF THE INTAKE SILENCER

General

ATTENTION

A damaged filter element must be replaced immediately. Otherwise dirt particles can enter the intake and cause damage to the engine.

Instruction

See Figure: Intake silencer.

1. Inspect the silencer housing (1) and silencer cover (2) for cracks.
2. Inspect the intake silencer tube (5) and carburetor socket (6) for cracks or porosity.
3. Clean the filter element (3) with filter cleaner and oil it afterwards slightly with air filter oil.
4. Inspect the filter element (3) for cracks.
Figure 6.8: Intake silencer

1 Intake silencer case  2 Intake silencer cover
3 Filter element        4 Filter element support
5 Intake silencer tube  6 Carburetor socket
INSTALLING THE CARBURETOR AND INTAKE SILENCER

ASSEMBLY OF CARBURETOR

Instruction

NOTE

*Use ROTAX® gasket set, part no. 293834.*

1. Assemble the components in the opposite succession as you disassembled them. See also Chapter 6) section: Disassembly of the carburetor.

ASSEMBLY OF FLOAT HOUSING

General

NOTE

*The tips of the bracket must be at the same height. Adjust them if necessary. In this check the float chamber should not have been fitted.*

Instruction

The following steps are required to install the float housing:

See Figure: Float chamber

1. Check the position of the float attachment (1) in its installed state.

2. When the floats (2) are inserted you should be able to see the word "ALTO" on their top surfaces.

3. Install and adjust the Bowden cable in accordance with the operating instructions.

4. Set the idle adjuster screw (3) and adjustment screw kit (4).

Figure 6.9: Float chamber

1  Float attachment          2  Float 4.0
3  Adjustment screw          4  Adjustment screw kit
ASSEMBLY OF INTAKE SILENCER

General

NOTE

*Before assembly, first immerse the filter element in filter oil. Squeeze out excess oil.*

Instruction

The following steps are required to install the intake silencer:

1. Assemble the components in the opposite succession as you disassembled them. See also Chapter 6. section: Disassembly of the intake silencer.
INSTALLATION OF FUEL PUMP, CARBURETOR

Safety instructions

⚠️ WARNING

Danger of explosion and ignition!
Overflowing and spoilt gasoline must be absorbed immediately with a binding agent and correctly disposed. Do not work with open flames and sources of ignition. Fuel must not come into contact with hot parts such as engine or exhaust since this may cause a fire.

NOTE

When assembling the parts make sure that the pipes are connected to the correct terminal!

Preparation

The following preparations should be carried out before installing the components:

Installation of fuel pump

➔ Install the fuel pump (8) with 2 rubber buffer and new lock nuts with washers.

Instruction

To install the carburetor and intake silencer the following steps are required:

See Figure: Carburetor and intake silencer.

1. Pull the hose clamp (3) over the carburetor flange.
2. Push the carburetor (1) onto the carburetor flange (2) and fasten the hose clamp (3).
3. Secure the intake silencer (4) with the hose clamp (5) on the carburetor.
4. Check the Bowden cable (6) for wear, especially where it bends. Bends can cause the throttle to be stuck in fully open. See Chapter 9.
5. Connect the fuel feed line (5) and Bowden cable (6) to the carburetor.
6. Connect the impulse pipe (7).
Figure 6.10: Carburetor and intake silencer

7. O-ring 12x2.5
8. Needle cage 15x19x24
9. Clutch primary drive gear
10. Clutch cover, black coated
11. Allen screw M6x30
12. Plug screw M18x1.5
13. Allen screw M8x70
14. Support plate
15. Oil level screw M18x1.5
16. Gasket
17. Ball bearing 6302
18. Secondary gear
19. Retaining ring with lug 20x1.2
20. Primary shaft 24/19 T
22. Retaining plate assy.
23. Washer 6.4
24. Allen screw M6x40
26. Thrust washer 8.5/15/0.5
REMOVAL OF THE CENTRIFUGAL CLUTCH ASSY.

Safety instructions

⚠️ WARNING
Danger of severe burns and scalds! Always allow the engine to cool down to ambient temperature before starting any work.

⚠️ WARNING
Danger of explosion and ignition!
Overflowing and split gasoline must be absorbed immediately with a binding agent and correctly disposed of. Do not work with open flames and sources of ignition. Fuel must not be allowed to come into contact with hot engine parts and components.

DRAIN OIL

Instruction

See Figure: Drain oil.

1. Remove the Magnetic drain plug (1) with gasket (2) from the crankcase and gearbox housing.
2. Drain the oil into a suitable vessel and dispose of it in the proper manner.

Figure 7.3: Drain oil

1 Magnetic drain plug M12x1.5  2 Gasket
REMOVAL OF CENTRIFUGAL CLUTCH, PRIMARY AND BALANCE DRIVE

Special tools

The following special tools/equipment are required.

<table>
<thead>
<tr>
<th>Part number</th>
<th>Designation</th>
<th>Field of application</th>
</tr>
</thead>
<tbody>
<tr>
<td>276016</td>
<td>Puller assy.</td>
<td>Starter gear</td>
</tr>
<tr>
<td>676202</td>
<td>Fixation tool</td>
<td>Starter gear</td>
</tr>
</tbody>
</table>

Instruction

See Figure: Clutch cover.

1. Loosen the 4 Allen screws M6x30 (1), 2 Allen screws M6x40 (4) include washer and retaining plate on the clutch cover (7).
2. Loosen the 4 Allen screws M8x70 (2) and remove them along with the support plate (3).
3. Remove the clutch cover (7).
4. Remove the gasket (8).

Figure 7.4: Clutch cover

1 Allen screw M6x30
2 Allen screw M8x70
3 Support plate
4 Allen screw M6x40
5 Washer 6.4
6 Retaining plate assy.
7 Clutch cover, Black coated
8 Gasket
Instruction
See Figure: Primary-Secondary gears.

5. Remove the secondary gear (2) and clutch primary drive gear (1).
6. Remove the retaining ring (4) from the primary shaft (3) using circlip pliers.

Figure 7.5: Primary — Secondary gears

1 Clutch w. primary drive gear 2 Secondary gear
3 Primary shaft 4 Retaining ring 20x1.2

Instruction
See Figure 7.4: Figure: Clutch cover.

7. Remove the needle cage (1) along with the O-ring (2) and thrust washer (3) from the crankshaft (4).

Figure 7.6: Clutch cover
See Figure: Clutch plate.

8. Block the starter gear (1) using the fixation tool part no. 676202 (2).

9. Loosen the 3 Allen screws M6x16 (4) and remove the clutch plate (3) using a flathead screwdriver.

**NOTE**

Screws are stuck in with LOCTITE 648, and can (if necessary) therefore first be heated with a heat gun.

See Figure: Clutch cover.

10. Loosen the hex nut M22x1.5 (3) using a flathead screwdriver.

**NOTE**

The hex nut is stuck in with LOCTITE 648, and must therefore first be heated with a heat gun.
Figure 7.8: Clutch cover

1  Starter gear  
2  Fixation tool  
3  Hex. nut M22x1.5

Instruction

See Figure: Special tool.

11. Pull the starter gear off the crankshaft using the special tool part no. 276016.

Figure 7.9: Special tool

1  Special tool part no. 276016 (Puller assy.)  
2  Starter gear
Instruction

See Figure: Starter reduction gear.

12. Remove the starter reduction gear (1) along with the thrust washer (2).

Figure 7.10: Starter reduction gear

1  Starter reduction gear
2  Thrust washer

Instruction

See Figure: Balance gear

13. Remove the shaft retaining ring (2) from the balance gear using circlip pliers.
14. Remove the balance gear (1).
15. Remove the third shaft retaining ring (3) from the primary shaft.

Figure 7.11: Balance gear

1  Balance gear 50 Z
2  Retaining ring 20x1.2
3  Retaining ring 20x1.2
CENTRIFUGAL CLUTCH ASSY. – INSPECTION

INSPECTION OF CLUTCH AND STARTER GEAR

Preparation

See Figure: Clutch plate.

1. Check the clutch plate.

   NOTE

   Thickness of clutch arm – 24.10 mm (0.95 in.)
   Thickness of clutch plate – min. 14.45 mm (0.57 in.)

2. Check the teeth on the starter gear for damage.

3. Remove any residue of LOCTITE adhesive from the starter gear

   Figure 7.12: Clutch plate

CHECK THE THRUST WASHERS, O-RINGS AND NEEDLE CAGE

Instruction

See Figure: Clutch drum.

1. Inspect the thrust washers (1) and O-rings (2) for signs of wear and replace them if necessary.

2. Inspect the needle cage (3) for sign of wear and replace if necessary.
Figure 7.13: Clutch drum

1. Thrust washer 15.2/25/1
2. O-ring 12x2.5
3. Needle cage 15x19x24
4. Clutch w. primary drive gear

INSPECTION OF STARTER REDUCTION GEAR

Instruction

See Figure: Starter reduction gear.

1. Clean the starter reduction gear assy. (1).
2. Checking that the starter reduction gear can move freely.

Figure 7.14: Starter reduction gear

1. Starter reduction gear assy.
2. Thrust washer 8.5/15/0.5
INSPECTION OF GEARS

Instruction
See Figure: Gears.

1. Check the teeth on the illustrated components for damage, pitting and deformation.

![Figure 7.15: Gears](image)

Figure 7.15: Gears

- 1  Starter gear 70 T
- 2  Balance gear
- 3  Secondary gear
- 4  Clutch w. primary drive gear

INSPECTION OF CLUTCH COVER

Instruction
See Figure: Clutch plate.

1. See Chapter 5 – proceed initially as in Section: Installing of shafts and wheels.
2. Check the halves of the housing.
3. Check the bearings (2) and if necessary replace the bearings.
Figure 7.16: Clutch plate

1 Clutch cover, black coated  
2 Ball bearing 6302  
3 Oil level screw M18x1.5  
4 Plug screw M18x1.5  
5 O-ring 17x1.5  
6 Retaining plate assy.
CENTRIFUGAL CLUTCH ASSY. – INSTALLATION

General

NOTE

The correct sequence MUST be followed. Once the starter gear has been installed it is no longer possible to install the starter reduction gear.

INSTALLATION OF STARTER REDUCTION GEAR

Special tools

The following special tools/equipment are required:

<table>
<thead>
<tr>
<th>Part number</th>
<th>Designation</th>
<th>Field of application</th>
</tr>
</thead>
<tbody>
<tr>
<td>897330</td>
<td>Lithium-based grease</td>
<td>Starter reduction gear</td>
</tr>
</tbody>
</table>

Instruction

See Figure: Starter reduction gear.

1. Insert the thrust washer (2) along with the starter reduction gear into the bearing point of the housing.

2. Grease the starter reduction gear assy. (1) with lithium-based grease in the area around the bearing points.

Figure 7.17: Starter reduction gear

1 Starter reduction gear assy. 2 Thrust washer 8.5/15/0.5
**INSTALLATION OF BALANCE GEAR, STARTER GEAR AND CLUTCH PLATE**

**Special tools**

The following special tools/equipment are required:

<table>
<thead>
<tr>
<th>Part number</th>
<th>Designation</th>
<th>Field of application</th>
</tr>
</thead>
<tbody>
<tr>
<td>n.a.</td>
<td>Circlip pliers</td>
<td>Shaft retaining rings</td>
</tr>
<tr>
<td>676202</td>
<td>Fixation tool</td>
<td>Starter gear</td>
</tr>
<tr>
<td>899788</td>
<td>LOCTITE 648</td>
<td>Starter gear</td>
</tr>
</tbody>
</table>

**INSTALLATION OF BALANCE GEAR**

**Instruction**

See [Figure: Balance gear](#).

1. Fit the shaft retaining ring (3) on position 3 using the circlip pliers.
2. Insert the balance gear (1) onto the primary shaft (4).
3. Fit the outer shaft retaining ring (2) on position 2 using the circlip pliers.

![Figure 7.18: Balance gear](#)

1. *Balance gear*  
2. *Shaft retaining ring 2*  
3. *Shaft retaining ring 3*  
4. *Primary shaft*
INSTALLATION OF STARTER GEAR

Instruction  See Figure: Starter gear.

1. Insert the starter gear (2) onto the crankshaft, take care to position it correctly in relation to the balance gear (1).

NOTE

Both components have a hole that has to overlap. This is to check the correct positioning of the gears.

![Figure 7.19: Starter gear](image)

1  Balance gear 50 T  2  Starter gear 70 T
3  Markers  4  Fixation tool

Instruction  See Figure: Fixation tool.

2. Block the starter gear (2) using the fixation tool (4), part no. 676202.

3. Lubricate LOCTITE 648 on the Hex nut M22x1.5 SW 30 H=6 (3) and fit it using a suitable tool. Tightening torque 180 Nm.

4. Remove excess LOCTITE.
INSTRUCTION OF CLUTCH PLATE

Instruction | See Figure: Clutch.

1. Lubricate LOCTITE 648 on the new Allen screws M6x16 (2).
2. Insert the clutch (1) on and secure it with 3 Allen screws M6x16 (2). Tightening torque 17 Nm.

NOTE

Strength class of screws: 12.9!

3. Remove excess LOCTITE.
Chapter 7

INSTALLATION OF CLUTCH DRUM AND SECONDARY GEAR

Special tools
The following special tools/equipment are required:

<table>
<thead>
<tr>
<th>Part number</th>
<th>Designation</th>
<th>Field of application</th>
</tr>
</thead>
<tbody>
<tr>
<td>897330</td>
<td>Lithium-based grease</td>
<td>Needle cage</td>
</tr>
</tbody>
</table>

Instruction
See Figure: Clutch drum.

1. Slide the thrust washer (3) and O-ring (2) onto the crankshaft (4).
2. Lubricate lithium-based grease on the needle cage (1) and slide it onto the crankshaft.

Figure 7.22: Clutch drum

<table>
<thead>
<tr>
<th>1 Needle cage 15/19/24</th>
<th>2 O-ring 12x2.5</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 Thrust washer 15.2/25/1</td>
<td>4 Crankshaft assy.</td>
</tr>
</tbody>
</table>

Instruction
See Figure: Secondary gear.

3. Slide the clutch primary drive gear (1) onto the crankshaft.
4. Fit the outer shaft retaining ring (4) on the primary shaft.
5. Engage the secondary gear (2) with the teeth on the primary shaft.

⚠️ WARNING
Risk of fatal injury!
The engine must not be started without a clutch drum.
Figure 7.23: Secondary gear

1 Clutch primary drive gear  
2 Secondary gear  
3 Primary shaft 24/19 T  
4 Retaining ring with lug
INSTALLATION OF SUPPORT PLATE AND CLUTCH COVER

Special tools

<table>
<thead>
<tr>
<th>Part number</th>
<th>Designation</th>
<th>Field of application</th>
</tr>
</thead>
<tbody>
<tr>
<td>n.a.</td>
<td>Torque wrench</td>
<td>Clutch cover</td>
</tr>
</tbody>
</table>

Instruction

See Figure: Clutch cover, support plate.

1. Fit new gasket (8).
2. Fit the support plate (3) using 4 Allen screws M8x70 (2). Tightening torque 22 Nm.
3. Use 4 Allen screws M6x30 (1) to secure the clutch cover. Tightening torque 10 Nm.
4. Fit the retaining plate assy. (6) using 2 Allen screw M6x40 (4) with washer 6.4 (5). Tightening torque 10 Nm.

Figure 7.24: Clutch cover, support plate

1. Allen screw M6x30 2. Allen screw M8x70
7. Clutch cover, black coated 8. Gasket
FILLING THE GEAR HOUSING WITH OIL

General

NOTE

With the engine in a horizontal position pour in 150 ml of gear oil.

Special tools

The following special tools/equipment are required:

<table>
<thead>
<tr>
<th>Part number</th>
<th>Designation</th>

Instruction

See Figure: Gear housing.

1. Install the oil plug screw (1) with a new O-ring.
2. Install the oil level screw (2) with a new O-ring.
3. Remove the air vent screw (3) with O-ring (4).
4. Add the specified quantity (150 ml) of gear oil through the opening in the housing.
5. Replace the air vent screw (3) with a new O-ring (4).

Figure 7.25: Gear housing

REMOVAL OF RADIATOR

Safety instructions

⚠️ WARNING

Danger of severe burns and scalds! Always allow the engine to cool down to ambient temperature before starting any work.

Preparation

The following preparations should be carried out before removing the components:

1. Open the radiator cap.

REMOVAL OF RADIATOR WITH CAP ASSY.

Safety instruction

ENVIRONMENTAL NOTE

Please observe the disposal regulations applicable in your area.

General

NOTE

*Drain the engine coolant in a suitable container.*

Instruction

See Figure: Radiator.

1. Unscrew the clamps (4). Disconnect the cooling water hose from the radiator. See also Chapter 8.

2. Disconnect the cooling water hose from the cylinder head cover (3).

3. Disconnect the cooling water hose from the water pump housing (2).
Figure 8.3: Radiator

2  Water pump housing  
3  Cylinder head cover  
4  Clamp 16–25
REMOVAL OF WATER PUMP SHAFT

General

NOTE

Collect the coolant in a suitable vessel.

Instruction

See Figure: Water pump housing.

1. Remove the cooling water hose.

2. Release and remove the water pump housing (2) and rubber ring (3) from the housing via 4 TAPTITE screws (1).

Figure 8.4: Water pump housing

1  TAPTITE screw M6x20  2  Water pump housing
3  Rubber ring 61.5x1.5x3.5

Instruction

See Figure: Water pump shaft.

<table>
<thead>
<tr>
<th>ATTENTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Water pump shaft has a left hand thread!</td>
</tr>
</tbody>
</table>

3. Unscrew the water pump shaft (1) from the primary shaft. To do so, the primary shaft needs to be prevented from rotation.

4. Remove the two oil seals (2).
Figure 8.5: Water pump shaft

1 Water pump shaft

2 Oil seal A 10x26x7

3 Primary shaft
Purpose: To inspect the cooling system of a BRP-Rotax engine.

RADIATOR – INSPECTION OF COMPONENTS

Instruction: See Figure: Radiator.

NOTE

If some of the cooling fins are slightly bent, they may be gently bent back into shape.

1. Use compressed air to remove dirt from the cooling fins of the radiator. Never use a high-pressure cleaner.
2. Visual check of the radiator assy. for any cracks or other damage.
3. Check that the radiator cap gasket is in perfect condition.
4. Check the cooling water hoses for porosity and leakage.
5. Check the radiator's windshield for cracks and damage (visual check).
6. Check the rubber buffers for wear and cracks.

Figure 8.6: Radiator

9 Allen screw M6x16
10 Windshield
INSPECTION OF WATER PUMP SHAFT

Instruction

See Figure: Water pump shaft.

1. Check the water pump shaft in the areas around the two shaft seal rings; if it is excessively worn it must be replaced.

2. Check the impeller for damage and/or any abnormal deformation, and replace it if necessary.

Figure 8.7: Water pump shaft

1  Water pump shaft
2  Oil seal A 10x26/7
3  Impeller
4  Dowel 4x16
INSTALLING THE RADIATOR

INSTALLATION OF RADIATOR WITH CAP ASSY.

Instruction

See Figure: Radiator.

1. Secure the radiator with cap assy. to the kart frame with 3 rubber buffers (5), windshield (10) with Allen screws (9) and washers using lock nuts M6 (7). Tightening torque 10 Nm.

**NOTE**

Take care to ensure that the radiator is installed in the correct position. New lock nuts must be used. Use washers on the kart frame.

2. Place the cooling water hoses (3) on the sockets on the radiator (4) and align them with the sockets on the engine; then tighten them with the hose clamps (4) to make a watertight connection.

3. Place 3 cable clamps 26/M6 (8) over the radiator hoses (two below, one above) and secure them to the frame with Allen screws w. rounded flange heads (9).

4. Connect the cooling water hoses (3) with the cable clamp 16–25 (4) on the engine.

INSTALLING THE WATER PUMP SHAFT

REPLACING THE OIL SEALS ON THE WATER PUMP

Instruction
See Figure: Shaft seal ring – water pump.

1. Remove the oil seals that need to be replaced from water pump with the insertion jig ROTAX® part no. 676021.

2. Grease the new oil seals with Molycote 111 near the sealing lip and use an insertion jig to press them back in.

NOTE
Take care to install them in the correct position. The hose spring on the outer oil seal must face "outwards", and the hose spring on the inner oil seal should not be visible.

Figure 8.9: Shaft seal ring – water pump

1 "Inner" oil seal
2 Insertion jig
3 "Outer" oil seal

INSTALLATION OF WATER PUMP SHAFT

Instruction
See Figure: Water pump shaft.

1. Secure the impeller of the water pump assy. with spring pin 4x16.

ATTENTION
Water pump shaft has a left hand thread!

2. Fix the water pump shaft (1) to the primary shaft and secure it with LOCTITE 243. Hold up the primary shaft (2) against this movement.
Instruction

See Figure: Water pump housing.

3. Secure the water pump housing (2) and rubber ring (3) to the housing using 4 TAPTITE screws M6x20 (1) and tighten to 7 Nm.

NOTE

Use only the special TAPTITE screws as specified. These are self-tapping. Other types of screw may destroy the threads in the housing, thus resulting in leaks.

4. Assemble the cooling water hose.
FINAL TASKS

Instructions

1. Using a funnel, pour the specified amount of coolant into the filling opening of the radiator.
2. Close the radiator cap.
3. Check that the cooling system is leak-free by warming up the engine.
4. Add some more coolant if necessary.

REMOVAL OF THE EXHAUST SYSTEM

Safety instructions

⚠️ WARNING

Danger of severe burns and scalds! Always allow the engine to cool down to ambient temperature before starting any work.

Special tools

The following special tools and equipment are required:

<table>
<thead>
<tr>
<th>Part no.</th>
<th>Description</th>
<th>Field of application</th>
</tr>
</thead>
<tbody>
<tr>
<td>251680</td>
<td>Spring hook</td>
<td>Tension spring</td>
</tr>
</tbody>
</table>

Instruction

Proceeds follows to dismantle the exhaust system:

1. Disconnect tension springs (3) with spring hooks from the exhaust socket (2).
2. Loosen the nuts M8 with washer on the rubber buffer and remove the exhaust system.
3. Take care about the exhaust gasket between exhaust socket and exhaust, replace if worn out.

Figure 9.2

1. Exhaust muffler assy.  2. Exhaust socket assy.
3. Spring                4. Rubber buffer 30x30xM8
5. Washer 8.4            6. Lock nut M8
CHECKING THE EXHAUST SYSTEM

ATTENTION
A worn isolating mat has a major engine damage as result!

Instructions
See Figure
1. Check exhaust system for cracks, bending or other damages. Replace if necessary.
2. Clean the ball socket of combustion residue and inspect for wear.
3. Check that the cover rivets are tightly seated.
4. Check exhaust gasket for cracks and inspect for wear. Replace if necessary.
5. Check rubber buffer for cracks and inspect for wear. Replace if necessary.
6. Check the retaining plate for cracks and inspect for wear.

DISASSEMBLING THE EXHAUST SYSTEM

General

NOTE
If the exhaust system noise increases, then the silencer baffle mat should be replaced.

Instructions
See Figure: Exhaust system.
1. Disassembly the exhaust muffler assy. and the silencer assy. Using the exhaust springs tool (part no .251680), remove exhaust springs. Remove the exhaust gasket.
2. Remove hex. collar screw M4x12 with lock nut from the silencer assy.
3. Remove old isolating mat.

ASSEMBLING THE EXHAUST SYSTEM

Instructions
See Figure: Exhaust system.
1. Roll up new isolating mat (3) on the inside silencer assy. (2).
2. Put both into the exhaust system.
3. Install cover with Allen screw M4x12 (6) and new lock nut M4 (5).
4. Install a new exhaust gasket (7).
5. Make sure front exhaust pipe end is properly aligned inside ball socket. Install 3 exhaust spring (8)
**INSTALLATION OF THE EXHAUST SYSTEM**

**Instructions**

For installation of the exhaust system, see latest Installation Manual for the engine type 125 MAX DD2 evo.
